PREFACE

This 14th edition of Gregory's Melbourne Street Directory incorporates The Hierarchy of Roads Study, convened by the Melbourne and Metropolitan Board of Works, which made changes to the categories of arterial roads throughout metropolitan Melbourne. Gregory's for the most part have adopted this sytem which relates to five categories of roads, which are:

Freeways: Those roads with full access control and grade separated intersections, whose primary function is to service large traffic movements.

Primary Arterial Roads: Those arterial roads whose main function is to form the principal avenue of communication for metropolitan traffic movements not catered for by freeways.

Secondary Arterial Roads: Those roads which supplement the primary arterial roads in providing for through traffic movement, to an individually determined limit that is sensitive to both roadway characteristics and abutting land uses.

Collector Roads: Those non-arterial roads which distribute traffic between the arterial roads and the local street system, which provide local connection between arterial roads and which provide access to abutting property.

Local Access Streets: Those streets not being arterials or collectors, whose main function is to provide access to abutting property.

The designation of these roads is shown in the Legend.

Care has been taken to ensure the accuracy of the maps and indexes, however, the publishers would welcome advice of any errors or omissions, and suggestions for further improvements to future editions.

The publishers gratefully acknowledge all assistance given by government departments and local government authorities, organisations and individuals in the production of this directory.

THE PIONEERS OF CRASH SAFETY ARE STILL TEST CRASHING THIS MANY CARS A YEAR.

In an effort to produce the world's safest car 70 to 80 new Volvos a year hit the wall.

And as ever, inside are the dummies. Not just straw men, some of our figures are undoubtedly close to you, in size and weight.

Equally, we have approximations for your wife and children (this includes infants).

Here every 'person' is wired to television monitors and computers.

With this pioneering technology we developed our crash cage.

And with last year's testing we discovered yet another way to safeguard Volvo passengers.

Simply, we did away with a totally rigid petrol tank filler pipe.

In its place went a flexible tube designed to prevent petrol leakage in case of impact.

Even better fire prevention.

Next year our improvements may not be as dramatic. But that won't slow down our crash schedule.

Because even if it takes 1000 cars to save a life, isn't it worth it? **VOLVO**

More performance, more everything else.

Dailey/V307
